

The Multi Flex mount is a metal extrusion/sliding rail that allows the user to mount SpaceArms, Wave Lights and more to a rail so they can freely adjust them horizontally on the surface. This helps make accommodations for the wide screen monitors and users that desire optimum flexibility.

Mounting rail is only available in Platinum. Hubs are available in Black, White, Platinum and Champagne. Additionally, it is available as a clamp and bolt thru mount application.

When specifying, specify the rail length and mount. Then, specify the monitor arm(s) or Wave Light separately.
